Comments: RKBExplorer, this website is a good example for linked open data explorer.

Explorer using Linked Open Data for Science mapping

http://www.rkbexplorer.com/explorer/

It uses the Linked Open Data cloud and http://sameas.org/ to make connections. It gives you some ideas of data meshing.

Choose an project in the area of “related projects”, such as SHIP, we thus got this following snapshot.

If we clicked one publication in the “Publications” area, we will get following snapshot.
Fields of “People”, “Organizations”, “Publications”, and “Courses and Materials” will show updated contents related to this publication “A Discussion of Practices for Enhancing Diversity in Software Designs”.
